

# Phosphorus

Phosphorus' Managed Lab Solution

## Increase your practice's value through insourced genetic testing

The Managed Lab solution provides physicians a simplified platform for turnkey integration of clinical genomics into practices across specialty and size. Boost patient experience and improve clinical outcomes while capitalizing on a new high-margin service line.

### How it works:

We provide the back-end infrastructure for practices to efficiently integrate clinical genomics into routine care. We manage the complexities of setting up a clinical-grade NGS lab, enabling you to leverage simplified in-house testing to deliver high-quality and personalized patient care.

### Implement turnkey in-house testing

Male and Female Infertility

Inherited Cancer

Pre-Implantation Genetic Testing

Carrier Screening

Pharmacogenomics

Cardiac Risk

### Phosphorus' core expertise:

Scientific & clinical genomic expertise

R&D and clinical product development

Bioinformatics

Software engineering

Regulatory & compliance

CLIA Accreditation & CAP certification

### Key benefits of Managed Lab:

\$4MM annual revenue

Achieve up to 50% margins after go-live

Turnkey 6-month implementation that includes Staff Training, Validation, and SOPs

Affordable capital expenses with option to finance

### About Phosphorus:

Phosphorus is a laboratory company founded in 2016 by scientists with the goal of improving human health through genomics. Our lab in Secaucus, NJ is CLIA licensed and CAP accredited, and licensed in all 50 states.
